SNMP MIBs etc.

A To Understanding Snmp

SNMP uses a tree structure with the root at '.', so OIDs (numerical object identifiers which can be translated with a MIB (management information base -- a human-readable text file which translates those numbers to names)) all start with '.' Many people omit the dot because it makes more sense to start with the OID 1 instead.

Simple Network Management Protocol

1 Answer. SNMP is based on the manager/agent model consisting of a manager, an agent, a database of management information, managed objects and the network protocol. The manager provides the interface between the human network manager and the management system. The agent provides the interface between the manager and the physical device (s) being managed.

A Guide To Understanding Snmp

The most difficult part of the SNMP system to understand is probably the MIB, or management information base. The MIB is a database that follows a standard that the manager and agents adhere to. It is a hierarchical structure that, in many areas, is globally standardized, but also flexible enough to allow vendor-specific additions.

The Comprehensive Guide to SNMP - LogicMonitor
