international aviation and shipping emissions in a kind of limbo. While the Act's target implicitly applies to all sectors, international aviation and shipping emissions have been left out of the 5-yearly carbon budgets that the Act requires, given questions about how ...

Aviation and climate change: confronting the challenge ...

Private sector aviation companies tend to recruit highly-qualified former Air Force pilots, but even the Air Force is short by about 2,000 pilots as of the end of 2018. Private and business aviation are suffering the most, as commercial airlines can typically offer more competitive salaries and more regular schedules. 3)

global warming contribution beyond direct CO₂ emissions. While the main greenhouse gas emission from powered aircraft is CO₂, jet airliners contribute to climate change in four ways as they fly in the tropopause: . Carbon dioxide (CO₂) CO₂ emissions are the most significant and best understood contribution to climate change.

IATA - Environment

Each year greenhouse gas emissions remain high the climate mitigation and adaptation challenges grow. The economic downturn was already in train in 2008, yet concentrations of CO₂ increased unabated. Without concerted effort across all sectors there will be little chance of avoiding 'dangerous climate change' and the aviation sector has a clear role to play.
