Ionic nomenclature is the process by which ionic compounds are named and identified. The basic rules for naming and identifying ionic compounds are (1) cation is named first and (2) anion is named second, plus the suffix -ide. The charge on an ion is the number of electrons gained or lost, and the net charge of any ionic compound must be zero.

Recognizing Ionic Compounds. There are two ways to recognize ionic compounds. First, compounds between metal and nonmetal elements are usually ionic. For example,  $\text{CaBr}_2$  contains a metallic element (calcium, a group 2 [or 2A] metal) and a nonmetallic element (bromine, a group 17 [or 7A] nonmetal). Therefore, it is most likely an ionic compound.

Most students take less than 10 minutes to take the quiz which leaves plenty of time (10 min) for them to read the passage and answer questions 1-6 in the ionic bonding packet. After about 20 minutes, I call on random students to provide answers to the questions in preparation for the Guided Practice portion of the lesson.

## **Ionic Bonding Independent Practice Answers**

Ionic bonding is the joining of electrically charged ions with those of non- electrically charged ions. In the past, this has been used in chemistry lab equipment to create hydrogen peroxide and oxygen gas, among other things. Now, a student can take advantage of this concept and use it to construct their own Ionic Bonding practice sheets.
