Wikibooks is a useful resource if you're curious about a subject, but you couldn't reference it in academic work. It's also worth noting that although Wikibooks' editors are sharp-eyed, some less scrupulous contributors may plagiarize copyright-protected work by other authors. Some recipes, for example, appear to be paraphrased from well-known chefs.

RCN: DIMACS/Simons Collaboration in Cryptography

Our schemes are not based on public-key cryptography nor number theory. They are extremely efficient implemented in software or make use of very simple inexpensive hardware. Our technology is particularly well-suited for use in cryptographic scenarios like those of the Clipper Chip, the recent encryption proposal put forward by the Clinton Administration.

This research coordination network, led by DIMACS and the Simons Institute for the Theory of Computing, will bring together cryptographers and others to depart from the traditional goals of cryptography, namely a relatively narrow focus on secure and authenticated communication, and significantly advance the state of the art toward systems that are simultaneously highly efficient, highly secure, and highly functional.
